## **DETAILED ACTION**

## **Priority**

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dedio 6,702,189, in view of Chudgar 5,293,583. Dedio teaches the claimed vehicle safety system including sensors 36,38,40 and 42 which connect to control device 32 to determine a crash or safety critical status, and further deenergize vehicular devices such as auxiliary heater 12, as claimed. The heater is not disclosed as an electric

**Art Unit: 3742** 

heater as claimed, but a burner type heater. However, the patent to Chudgar is applied for teaching a vehicle and use of an electric heater in the vehicle as an auxiliary heater. Chudgar thus evidences that auxiliary heaters in vehicles can comprise electric heaters. In view of this teaching it would have been obvious to modify the Dedio system to use an electric heater as the auxiliary heater, enabling more versatility in the heating and use of a safer heating and the that Dedio also disconnects other devices in the auto such as fuel supply for the engine, in the event of a crash and the above modification would merely comprise tripping a relay for an electric heater in lieu of tripping a solenoid valve for the heater, well within the skill level of one of ordinary skill in the art. As per claim 4 use of a PTC heater is an oblivious choice, such use well recognized in the art for use in vehicles.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark H. Paschall whose telephone number is 571 272-4784. The examiner can normally be reached on 7am - 3pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robin Evans can be reached on 571-272-4777. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
